Our emergency operations center project is inspired by African fabric patterns. The idea is to create a project based on one of the multiple shapes we find in the well-known wax fabric. We choose the pattern as our inspiration as a reminder of the African heritage. It's a way of reflecting the African culture in our project. The resumption of the African fabric is present not only in the plan, but also in the structure, a removable one made with local materials.

The concept of the project is the roofing-free area. A space that has two main different uses: either tranquility and peacefulness by the water fountain where you can simply relax, or a gathering space to meet and communicate with others.

Right at the center of the roofing-free area, there is another element that distinguished the project: the technical water system. The idea is to make the roof a functional part of the space, and the distribution of spaces is based on it. On the perimeter, there is the waiting room, meeting, healthcare area, the spaces made for the people to use, then higher up you can find the office zone for the nursing staff, the organization committee, and the storage room.

The main entry for the victims, another added ones in case that would lead to the waiting room. The inconvenience of the situations they find themselves in leaves them facing the risk of finding an accommodation space, a space that is safer to offer them safety. That's why the architecture is inspired by the African culture and heritage. Learning what is in rooted inside a remembrance of space. Indeed there is a reason to create the space that would serve for meditation, rest, and healthcare.

Children, elderly, and families, are all forced to leave their native land due to different circumstances. The inconvenience of the situations they find themselves in leads them to the need of finding a welcoming space: a space that is able to offer them safety. Leaving what is in rooted inside a remembrance of space. Indeed there is a reason to create the space that would serve for meditation, rest, and healthcare.

The plan is conceived in a way that the staff has easy access to all the zones in the emergency center. Surely, everything is close by for the staff but thanks to the visual walls and the inclined forms of some elements, it keeps the offices and the storage away from the people's reach.

Also, there are entries for the staff, and an entry for the equipments needed right next to the storage room for an easier accessibility and circulation.
